CraftMaster Molded Door Design Catalog

VARIETY OF DESIGNS, FROM PASSAGE TO BIFOLD

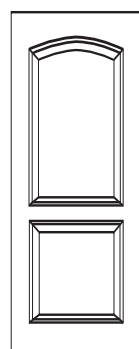

Made from molded high-density fiberboard, CraftMaster door designs resist shrinking, swelling, cracking and joint separation. Engineered wood design outperforms wood doors while offering superior value.

PRODUCT SPECIFICATIONS

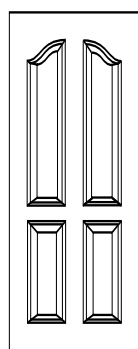

- CraftMaster molded doors are routinely tested against 14 different criteria including water resistance, adhesion and overall durability to ensure consistent product quality. For full details, visit craftmasterdoors.com.
- All doors are available primed and ready to paint. For ease of installation, select profiles are available in four Pre-Stained colors and in Pre-Finished White.
- CraftMaster door designs can be specified in 1 3/8" and 1 3/4" thicknesses
- All 1 3/4" thick CraftMaster doors can be manufactured to meet 20-, 45- and 60- minute fire ratings as per Warnock Hersey specifications 
- For the heft and sound-deadening properties of solid wood, specify solid core construction

CraftMaster molded doors are manufactured using advanced panel technology, wood fiber, and environmentally safe resins to create precisely engineered wood products that perform better than solid wood counterparts. A CraftMaster door facing is made from an engineered wood fiber mat that is molded under intense heat and pressure into an 1/8" (3.2mm) thick sheet of high-density fiberboard. The result assures consistent quality from door to door, room to room, and home to home.

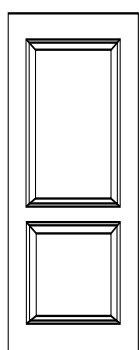

By-products from sawmill operations are used to convert wood chip waste into designs of true beauty.
